Vapor Barrier Cover for Single Gang Ceiling Boxes

Prevents Air Infiltration around Round and Octagonal Boxes

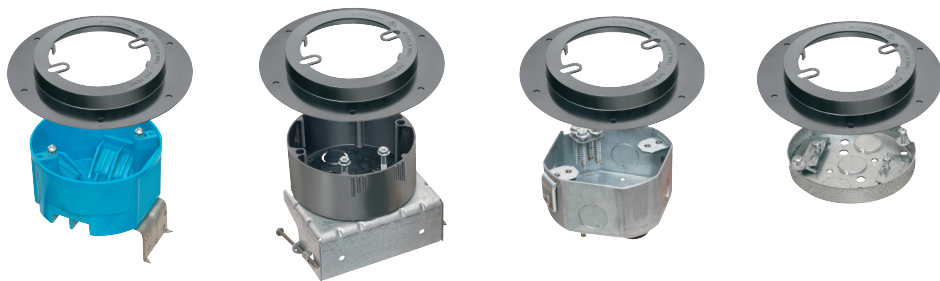

NEW!

VBR1

Holes in flange
ship flashed-over

Easy installation on most round or octagonal plastic or steel ceiling boxes

Arlington's VBR1 vapor barrier cover prevents air infiltration around ceiling boxes – without the need for a gasket.

Designed for new work, VBR1 offers easy installation on most round or octagonal, plastic or steel ceiling boxes. It's also suitable for wall mount installations.

Use #8-32 screws (not supplied) to temporarily hold VBR1 in place during drywall installation. Once the drywall is installed remove these screws and install the fixture or fan.

Economical. No gasket required.

Helps meet energy saving codes where applicable.

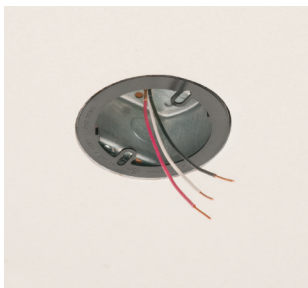

VBR1 covers a round or octagonal plastic or steel ceiling box.

Attach VBR1 to box with #8-32 screws you supply...

...through the device holes or flashed-over holes to hold it in place during drywall installation.

Install drywall.

After drywall installation, install fixture or fan bracket per manufacturer's instructions.

Finished fan installation.

Vapor Barrier Cover for Single Gang Boxes

Prevents Air Infiltration around Steel or Plastic Boxes

Arlington's newest vapor barrier product prevents air infiltration around single gang boxes – without the need for a gasket.

Designed for new work, VB1 is easy to install on most plastic or steel single gang boxes.

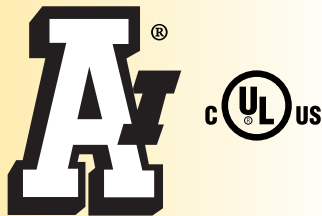

Use the supplied #6-32 screws to temporarily hold the VB1 in place during the installation of 1/2" or 5/8" drywall. Once the drywall is installed remove the #6-32 screws and install the device. Secure device box to framing member per manufacturer's instructions.

You can also fasten the VB1 to the framing member using the flashed-over holes in the flange.

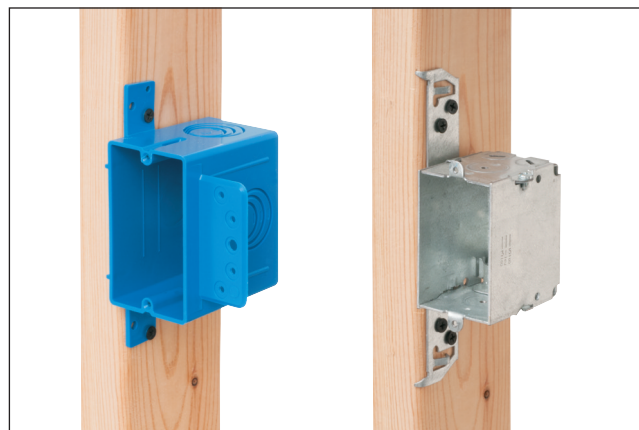

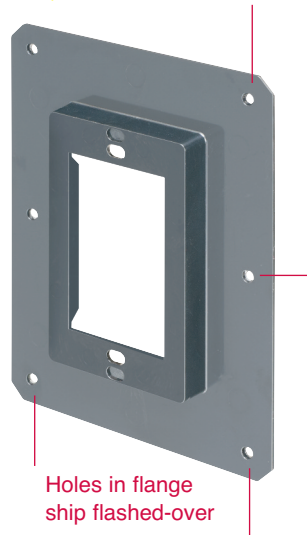

Easy installation on most single gang boxes...

Economical. No gasket required.

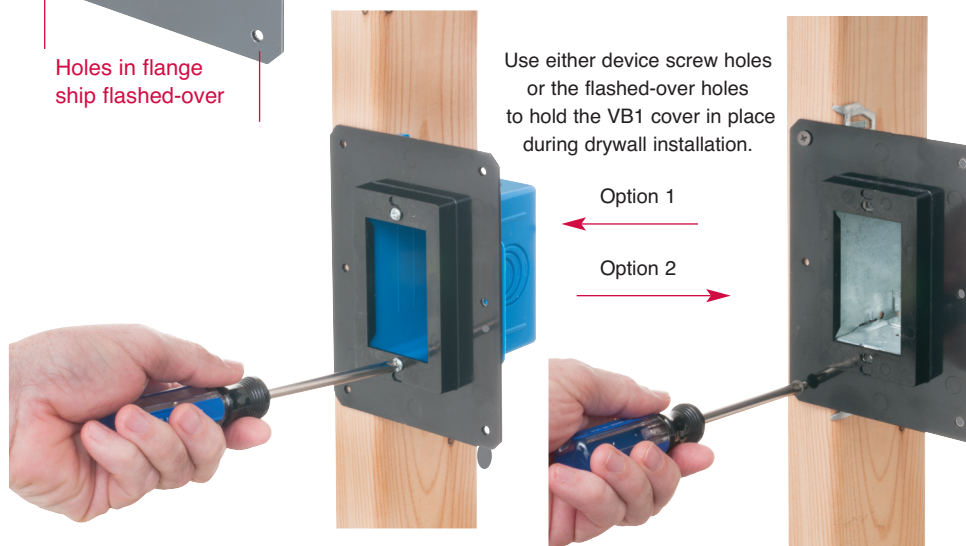

Helps meet energy saving codes where applicable.

NEW!
